The objective of this app is to know how a login works with the flask framework, here is a brief description on how will be displayed this app once you run it.

- 1,2 and 3 section, show us how a login is, and one you enter, in manner of exercise/example, you are redirected to a home page, in the 7 picture you can see the registered users and with the password hashed.
- If the user doesn't exist or the password is incorrect, will be display the message that corresponds. (image 5)
- In the example exist a section on how to enable to access to a route if you are login, if not, an unauthorized page will be displayed.

Thank you for take your time to read this, have a good day!.
